It also offers protection against the "UV" rays and acid rain.

* The use of the orbital shiner machine allows working faster and more carefully when applying the wax.

Apply two to three spiral of wax on the wool pad of the orbital shiner machine.

Cover the surface of the pad with large movements.

Do not exert pressure on the machine.

Just with the action of the machine, without pressure, you will have better results.

When the wax is dry, remove the white wax film in the same order that was done for the application and the polishing.

The long-lasting MAG wax reacts by closing the natural porosity of the "Gel Coat" to prevent the incrustation of dirt.
