### Do not apply on rough section.

It is possible to repeat the operation with dark colors or oxidized boats.

It is important to use a polisher with a **natural wool disc** to promote heat during polishing. The revolution of the polishing machine must be between 1 000 and 2 500 revolutions per minute.

Apply with a brush or cloth, with small touches on a section of about 1 square meter.

Apply the cleaning / polishing product with the wool pad of the polishing machine. Without starting the polishing machine, apply uniformly on the whole section that you're working on to avoid splashing when starting the polisher.

Polish the section until complete disappearance of the product to obtain the optimal results.

This product is excellent for easy removal of rubber or paint of all brands.

**See quick results after a single use!**
